

Activity and Key Routine Monitoring

Using non-invasive motion sensors, the TEQ-Home detects anomalies in key routines and remotely alerts caregivers when help is needed. The intelligent messaging system can even ensure key events such as taking medication and doctors' appointments are not missed.

TEQ-Home

POWERED BY SOFIHUB

TEQ-Home has been designed to promote the independence and wellbeing of ageing and disabled populations.

TEQ-Home monitors movement and key routines throughout the day. Using non-invasive motion sensors, it detects anomalies in key routines and remotely alerts carers and family when help is needed.

- ✓ Reports on and monitors daily activities remotely to ensure adherence
- ✓ Help to improve routines remotely by adding recurring and one-off reminders
- ✓ Be alerted when key routines are not adhered to and send help immediately
- ✓ Detects changes and irregularities in daily activities, which can be a precursor to some medical conditions
- ✓ Intelligent messaging system for reminders to ensure key events such as taking medication and doctors' appointments are not missed
- ✓ Minimal installation and tech support needed
